

VDI is dead.
The future is
LOCAL.

About Venn

Venn® is the industry's first Virtual Desktop Alternative (VDA) built for regulated and security-minded organizations. Powered by its patented LocalZone™ technology, Venn protects SaaS applications and sensitive data, delivering Zero Trust security with a 10X better user experience than legacy VDI.

With LocalZone, a new era of Freedom without Compromise is made possible by putting users first and delivering a fast, familiar, and flexible work experience – all without compromising organizational security or compliance. The benefits of this virtual desktop alternative over legacy VDI solutions include:

PRODUCTIVITY — Venn empowers users to work locally — the way they want to — on the devices of their choice, from anywhere.

PROTECTION — Venn protects work files, data, and SaaS applications from accidental or malicious exfiltration, compromise, or loss.

PRIVACY — Venn separates professional from personal computing and ensures that employees' non-work-related activities are not monitored.

Our Mission

To help organizations safely empower their people to work better and live better.

“Today, it's no longer about work versus life. It's about work plus life. Venn serves that sweet spot where work and life come together.”

- DAVID MATALON, CEO & CO-FOUNDER

Who We Serve

Over 700 organizations, including 400 financial services firms, trust Venn to meet FINRA, SEC, NAIC, and SOC 2 standards.
